THIS AIN'T

ROCKET

---

SCIENCE.

**B**ut it sometimes comes a close second. With the sheer volume of goods being shipped by land, sea and air across this country, and around the world on a daily, no, make that hourly basis, and the rapid pace required to meet increasingly tight transport deadlines, the need for exceedingly well designed and sturdily built shipping crates to hold all those goods is overwhelming.

And the need for a customer-focused, highly reliable and totally accountable crate building company is of primary importance.

Boxer Building and Crating is a leading solution provider for virtually any aspect of global shipping and packaging requirements. With over 15 years practical experience in the wood packaging industry, Boxer has the breadth of knowledge and expertise to design and manufacture an infinite variety of wooden shipping crates and boxes in almost any shape and size, for almost any industry. Our skilled crews work effectively and efficiently to engineer the highest quality wooden crates, manufactured to exacting specifications to protect our clients' valuable cargo. For specialized requirements, Boxer can utilize custom hardware to prepare crates with hinges, casters, handles or locking mechanisms.

By fully understanding every detail of our clients' shipment, Boxer is able to minimize cost, maximize protection and effectively transport our clients' goods using the safest, most secure

At Boxer, the oil and gas industries are our bread and butter. We thrive on the challenges that they throw at us, and are seldom surprised by the truly unusual things that need to be crated. That being said, our customer range is vast. From fine art galleries shipping priceless paintings to high-tech companies sending sensitive electronic components, each project is approached with absolute commitment, attention to every detail, and client assurance that every job is expertly handled from start to finish, with zero margin for error.

As with many of our clients, the environmental impact of our operations is of significant concern, and at Boxer we too are committed to reducing our carbon footprint in any way possible. We engineer all of our crates to eliminate as much waste as we can during the construction process, and actively recycle whatever scrap and waste may be produced. And, to overstate the obvious, all the boxes and crates built by Boxer are made of high-grade lumber – the original and ultimate renewable resource.

**W**hatever size,  
whatever the  
weight, whatever the cargo,  
Boxer can build a custom

crate to ship your goods to their final destination. 100% safe, 100% secure and with 100% client satisfaction.

**B**oxer Building & Crating has always based its business on being the company that provides a genuine alternative to the norm. This is demonstrated not only by our exceptional service, but also by the seemingly chaotic but utterly professional and controlled atmosphere in which we work; in our meticulous approach to each project we undertake; and in our unwavering assurance to our customers that their pressures and concerns are now *our* pressures and concerns.

Delicate porcelain antiques. Massive cast-steel ball valves. Directional drilling heads. Fragile plasma flat screens. Autographed hockey jerseys. By land, by sea or by air, if it's going to be shipped, Boxer is going to be able to crate it. We have always prided ourselves on being able to package the unique and unusual, which makes the ordinary and mundane even more precise and exact.

Boxer has long been a member of IPPC and CWPCA, meeting their stringent standards for worldwide conformance, and every crate and pallet we build is IPPC certified for trans-border export.

From warehouse storage crates to V block skids, from heavy-duty workbenches to specialized vehicle crates, our production capabilities are limitless, our experience is unprecedented and our dedication to our customers is indisputable.

After all, it takes the same amount of time and effort to do the job right as it does wrong. So, we just do it right.
